

Assignment 2:

917719C008
917719C054
917719C062
917719C089

1. Create User table with user with email, username and password.

The screenshot shows the IBM Db2 on Cloud console interface. The 'Tables' tab is selected, displaying a list of tables in the 'YGG09863' schema. The 'USERS' table is highlighted. The 'Table definition' panel on the right shows the structure of the 'USERS' table:

Name	Data type	Nullable	Length	Scale
USERNAME	VARCHAR	Y	32	0
EMAIL	VARCHAR	Y	32	0
PASSWORD	VARCHAR	Y	32	0

The table definition panel also indicates 'Approximate 0 rows (0 KB)' and 'Updated on 2022-10-02 07:49:59'. A 'View data' button is visible at the bottom of the panel.

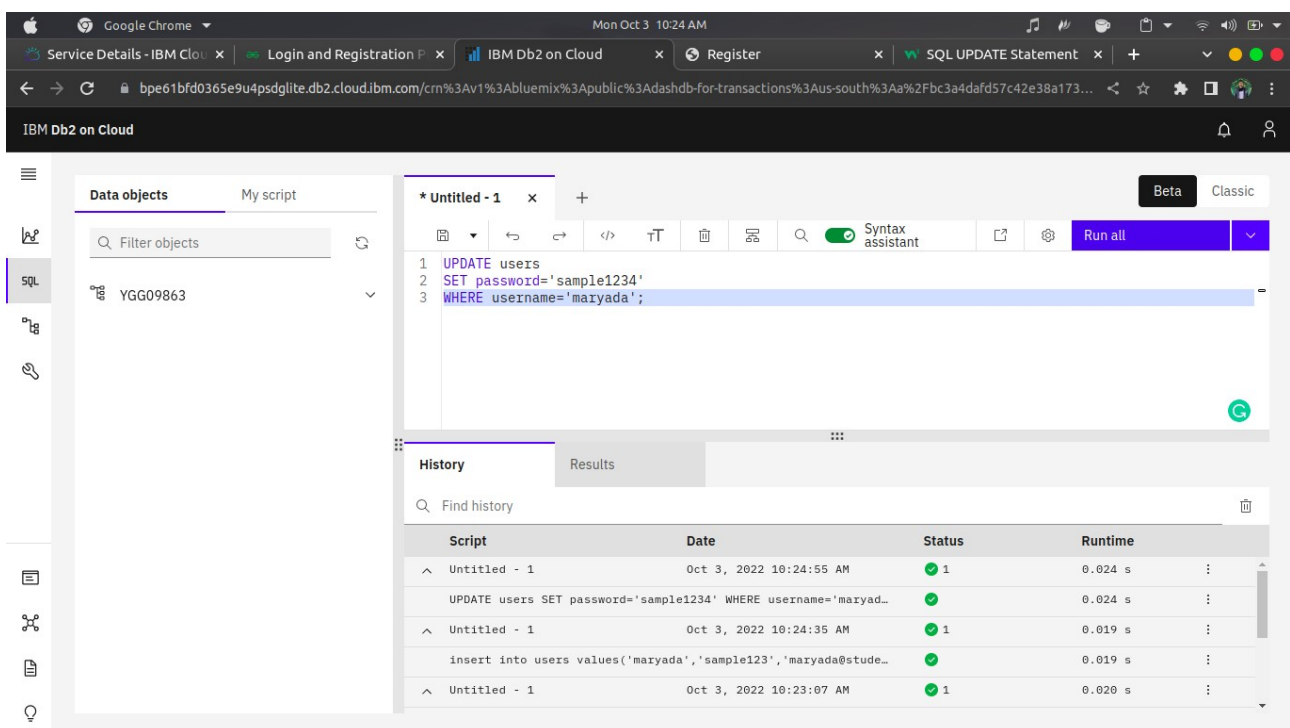

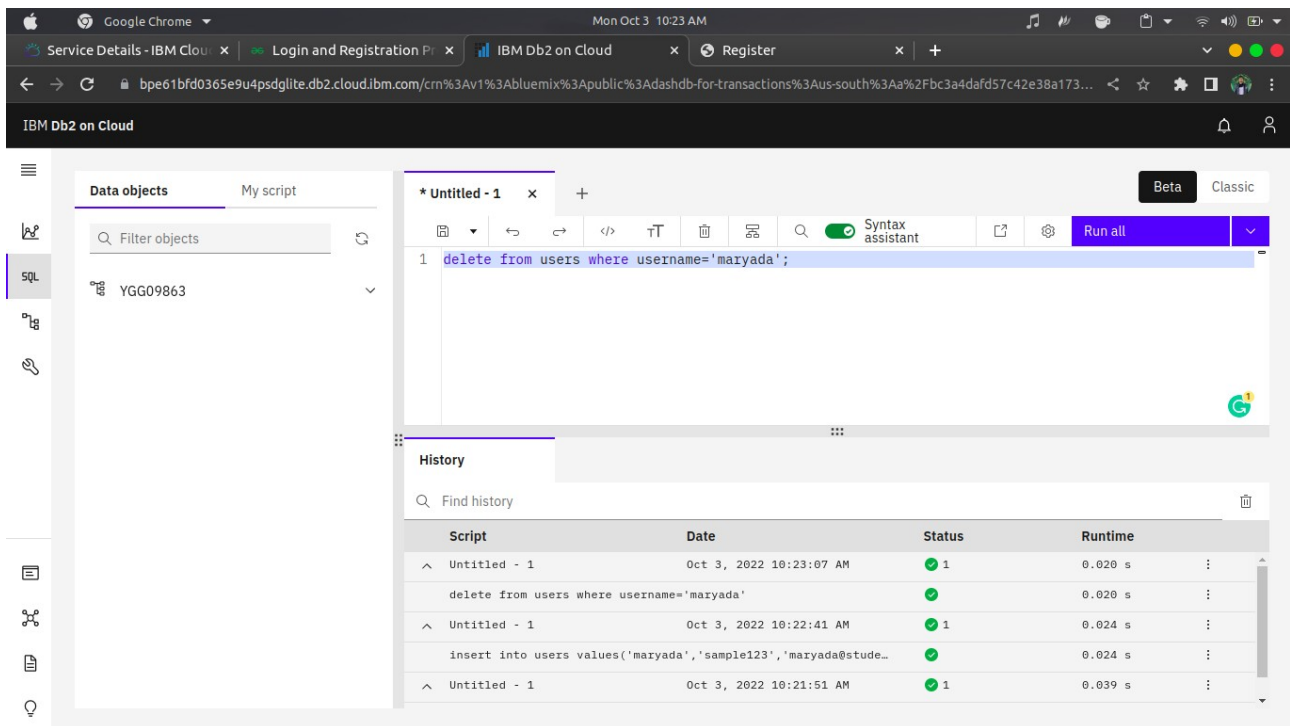

2. Perform UPDATE, DELETE Queries with user table

The screenshot shows the IBM Db2 on Cloud console interface with the 'SQL' tab selected. The 'Data objects' panel on the left shows the 'YGG09863' schema. The 'My script' panel on the right contains the following SQL query:

```
1 insert into users values('maryada','sample123','maryada@student.tce.edu');
```

The 'Run all' button is visible. Below the script panel, the 'History' panel shows the execution history of the script:

Script	Date	Status	Runtime
Untitled - 1	Oct 3, 2022 10:22:41 AM	✓ 1	0.024 s
insert into users values('maryada','sample123','maryada@student...		✓	0.024 s
Untitled - 1	Oct 3, 2022 10:21:51 AM	✓ 1	0.039 s
delete from users where username='maryada'		✓	0.039 s

3. Connect python code to db2. (Done in question 4)

4. Create a flask app with registration page, login page and welcome page. By default load the registration page once the user enters all the fields store the data in database and navigate to login page authenticate user username and password. If the user is valid show the welcome page

app.py:

```
#!/usr/bin/env python3
# -*- coding: utf-8 -*-
```

Output: Start the application:

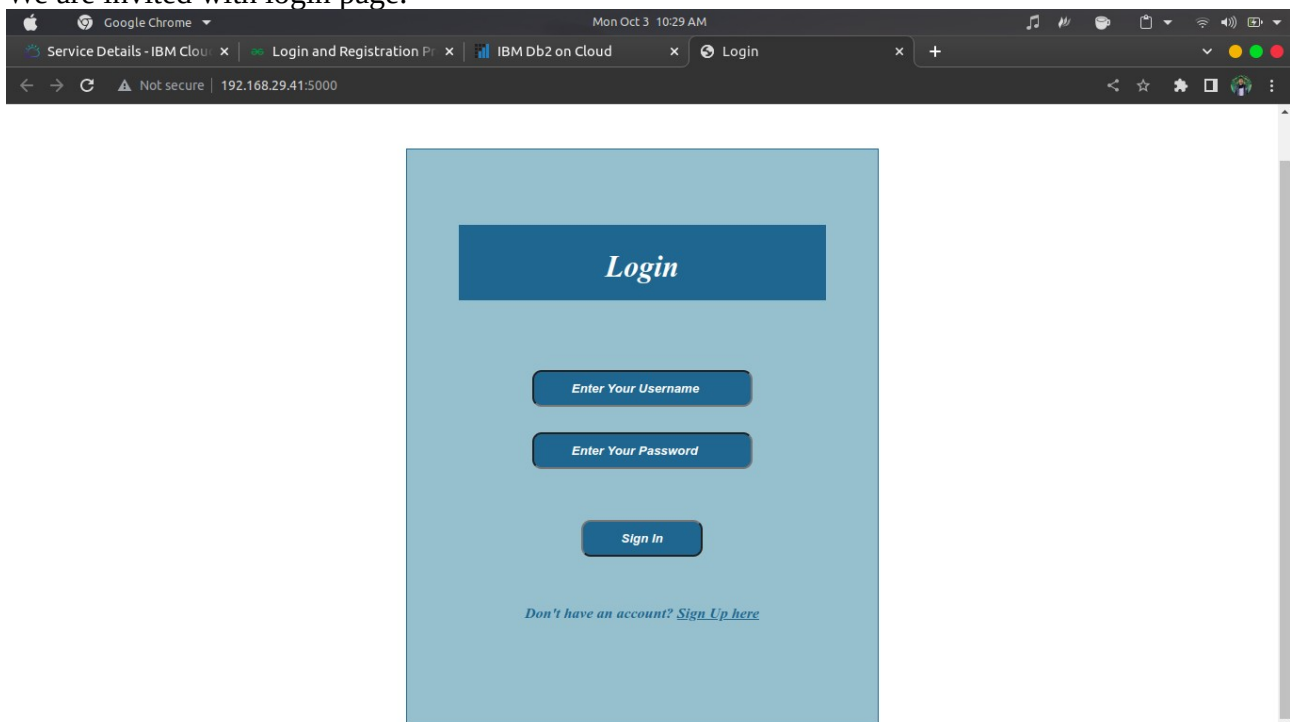

The screenshot shows the Spyder Python IDE interface. A terminal window is open, displaying the output of running a Flask application. The output includes a warning about using a development server in production, the server's address (http://192.168.29.41:5000/), and the results of GET and POST requests. The console window on the right shows the IPython console output, including the installation of the ibm-db package.
